- **Editing:** Video & Poster Editing
- **Technical Skills:** Computer Architecture, Data Structures & Algorithms, Operating Systems
- **Soft Skills:** Leadership, Time Management, Quick Learner

PROJECTS:

➤ **StayWhere(Ongoing)**

A personalised android-based estate application, designed to redefine the way tenants find flats and rooms, and how property owners list their properties for rent or sale. This app combines a fully responsive and user-friendly experience with powerful features that cater to both tenants and property owners, making it an indispensable tool in the real estate market

➤ **Portfolio Website**

The Personal Portfolio Website is a responsive and visually appealing platform designed to showcase my skills, projects, and educational background. Built using HTML and CSS, this website serves as a digital resume and an interactive showcase of my work.

➤ **Library Management system**

The Library Management System overviews the concept of storing and generating all the data or records of the book contained within the library. This can be known as a general database which stores the data of the book details. It helps in searching the details by reducing time consumption. Not only protects the details of the books in the library but also saves all the data up to date without missing any. This is the major benefit of the Library Management System.
